

FENWICK VALE GENERAL HOSPITAL

Department of Internal Medicine

ADMISSION NOTE

Encounter: ENC-2026-0512

Patient: Ms Odalys Ferreira, DOB 9 November 1958, hospital number 52-90144

Admitted: 14 April 2026, 06:20

Clinician: Dr Marcus Villanueva, Consultant Physician

1. PRESENTING COMPLAINT

Ms Odalys Ferreira presented with severe headache, blurred vision and a blood pressure of 224/126 on arrival by ambulance. She was diagnosed with a hypertensive crisis and admitted for urgent blood pressure control.

2. ALLERGY HISTORY

Ms Odalys Ferreira is allergic to Zenapril. The reaction recorded in 2015 was facial and laryngeal angioedema requiring an overnight admission, and this allergy is to be treated as absolute.

The patient also reports a past intolerance to Zentanyl, described as nausea rather than an allergic reaction. This is recorded as an intolerance, not an allergy, and does not carry the same prescribing restriction.

No other drug allergy is reported.

Encounter ENC-2026-0512 · continued

3. RELEVANT HISTORY

Hypertension, diagnosed 2009, previously managed on a calcium channel blocker withdrawn in 2015 following the angioedema episode. Osteoarthritis of both knees. Subclinical hypothyroidism, monitored but not treated.

4. MEDICATIONS ON ADMISSION

Amlodipine 10mg once daily, own supply. Levothyroxine was trialled in 2021 and discontinued after six months with no clear benefit. Paracetamol as required for joint pain.

Encounter ENC-2026-0512 · continued

5. EXAMINATION

Pulse 92 regular, respiratory rate 18, oxygen saturation 97 per cent on air. Fundoscopy shows no papilloedema. Neurological examination is unremarkable.

6. PLAN

Intravenous labetalol to control blood pressure, with a view to establishing an oral regimen before discharge. Follow-up to be arranged with the cardiology outpatient clinic once stable.

Dr Marcus Villanueva, Consultant Physician
